If you stock it they will come

Now available in 15 count cases

Currently, DuraTite Systems offers a 6", 7" and 8" take off with and without a stay-in place damper. Now all the sizes are available in a 15 count case. The 6" and 7" take offs are packed 44 cases or 660 units per pallet and the 8" is packed 36 cases or 540 units per pallet. Mixed pallets are available for a limited time. We have sold the polypropylene take off to distributors all over the country and dozens of contractors and installers are making the switch to DuraTite everyday.

The advantages are clear: **no more personal injuries** which eliminates downtime and workers comp claims, **quick connections** can increase install capacity (close to 50%) and the fastening system lets installers **preinstall flex** to save more time in the field.

DuraTite is responding to the markets demand for more sizes and plans to have the 5" take off in late June followed closely by the 4", 10" and 12". Other sizes will be considered depending on market demand. The saddle take off for round trunk lines is also in development for introduction later this year. DuraTite will accept preorders now for the new sizes and can fulfill orders for the 6", 7" and 8" take offs immediately.

DuraTite take offs are **UL approved** for all current sizes and has also received code approval in most jurisdictions across the country. If your local code official would like samples or additional information on our UL2043 test results for heat and visible smoke release please email sales@duratite.com.

Affordable Comfort – April 23-25 Cleveland, OH

Contractors and installers from across the country attended the ACI Show in late April. DuraTite is approved for all of Ohio and available at select distributors. The attendees were most interested in the time savings available with the preinstalled flex, the elimination of personal injury and the energy efficiency of DuraTite's stay-in-place damper.
